01

Description

Smoke alarms determine fire by sensing small particles in the air.

If the reading is above 700, then the smoke alert gets triggered along with the buzzer and an email gets sent using IFFFT. Statistics can be monitored by ThingSpeak.

creating an applet to send
an email on IFTTT when
smoke is detected

The screenshot shows a blue card representing an IFTTT applet. At the top, the text reads "If Maker Event 'Alert', then Send me an email at 2005623@uj.edu.s a". Below this, it says "by 2005623". There is a toggle switch labeled "Connected" which is currently turned on. At the bottom left, there is a person icon followed by the number "1". At the bottom right, there are icons for sharing (a chain link) and email (an envelope).

If Maker Event
"Alert", then Send
me an email at
2005623@uj.edu.s
a

by 2005623

changing the documentation of the trigger

Your key is: **dTn2A9qwwaJzjA30I5fQPo**

◀ Back to service

To trigger an Event with an arbitrary JSON payload

Make a POST or GET web request to:

```
https://maker.ifttt.com/trigger/Alert/json/with/key/dTn2A9qwwaJzjA30I5fQPo
```

** Note the extra `/json` path element in this trigger.*

With any JSON body. For example:

```
{ "this" : [ { "is": { "some": [ "test", "data" ] } } ] }
```

You can also try it with `curl` from a command line.

```
curl -X POST -H "Content-Type: application/json" -d '{"this":[{"is":{"some":["test","data"]}}]}'  
https://maker.ifttt.com/trigger/Alert/json/with/key/dTn2A9qwwaJzjA30I5fQPo
```

Please read [our FAQ](#) on using Webhooks for more info.
